Motive Power (Traction) Batteries & Cells

Motive Power Batteries Introduction

SUNLIGHT motive power (traction) batteries provide a high level of power and reliability for all industrial truck applications. The extended range of both DIN and BS cells covers all types of applications, from low capacity up to heavy duty multi shift operations.

SUNLIGHT traction batteries provide a high efficiency during the discharge period of the battery, an efficiency which is achieved by the use of advanced components in the manufacturing process of the plates. The design of the positive and negative plates has been optimized to gain more energy in the cells. All these technical improvements have enabled high capacities in the given external dimensions of the cells.

Benefits

- · Available in both DIN and BS ranges
- · Optimized design to achieve high capacities
- Long life service
- Readily available
- · Low maintenance requirements

Technical Features

- Optimized plate design delivers capacities exceeding nominal values of international standards
- 100% initial capacity from the first cycle
- · Fully insulated terminals and connectors
- · Long cycle life
- · High energy density
- Robust, durable cell construction
- Improved voltage stability and discharge performance

Applications

- Light-duty applications
 - Single shift operation with light usage of the battery and discharge lower than 60% of ${\rm C}_5$. Electrolyte at about 30°C.
- Normal-duty applications
 Single shift operation with discharge up to 80% of C₅. Electrolyte at 30°C.
- Heavy-duty applications
 Single shift operation with discharges of 80% of C₅ and high discharge currents.
 Boost charging to increase the availability of the battery. Multi shift operation with or without battery charges in intervals, in between operation. High ambient temperature.

Motive Power Batteries Construction

Plates

Positive tubular plates are constructed with lead-antimony alloy so as to optimize cycle life with the lowest water consumption possible. Negative grid plates are designed with pasted lead grid in order to provide a high spongy level and reduce capacity loss. Microporous separators are designed to have a high porosity grade so as to ensure better ionic circulation and low internal resistance. Boxes and lids are impact resistant and made of polypropylene (PP) and are thermowelded to prevent electrolyte leakage.

Terminals

Terminals are designed to prevent electrolyte leakage and the subsequent damage to the copper connectors. Bolt-on type terminals allow cells to be replaced or moved without excessive labor.

Plugs

- Flip top plugs, with electrolyte basket level marking, are fitted on the cells. These plugs allow the escape of gases during the charging process of the battery, and also provide a safe anti-surge baffle for the electrolyte during operation.
- The automatic filling system vent plug automatically ensures the optimum filling level of the cells, minimizing the required maintenance time for the battery thus the required excessive labor cost.

Connectors

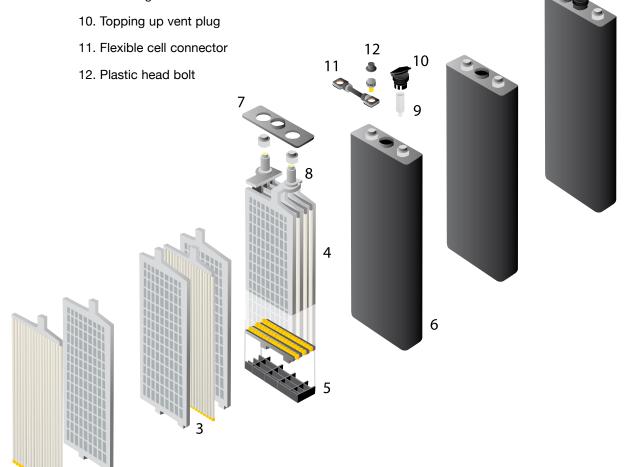

The cells inside a SUNLIGHT battery are connected with the use of fully insulated flexible copper connectors. The use of the bolt-on connector design allows the user of the battery to replace or move the cells easily without excessive labor thus extra cost.

Flexible Intercell Connectors	Flip Top Plug	Automatic Refilling Plug

Motive Power Batteries Mechanical Construction

- 1. Positive plate
- 2. Negative plate
- 3. Plate set
- 4. Plate set assembly with terminal bridge and screw terminal (M10)
- 5. Sediment spacer
- 6. Cell container
- 7. Cell lid
- 8. Pole with threaded insert (M10) and sealing ring
- 9. Anti-surge baffle

Motive Power Batteries Optional Equipment

Electrolyte Circulation System (Airlift System)

Electrolyte Circulation System has been developed to extend the autonomy of the electrical vehicles (forklifts etc.) used in installations. Each battery cell can be equipped with an Airlift System. The principle behind it, is that a pump is used to circulate low-level compressed air into the cells and create a homogenous electrolyte mixture throughout them

Benefits of the Airlift System:

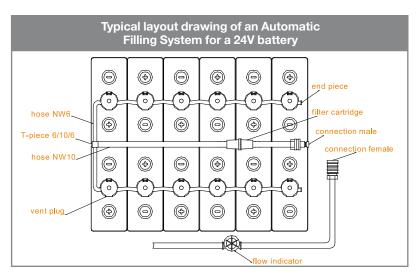

- ✓ Low level temperature
- ✓ Electrolyte stratification is prevented
- ✓ Battery charging is optimized

In more detail:

- The battery can be fully charged in 5 ½ hour's time, without any significant increase of the cell's temperature.
- The stratification of the electrolyte is prevented during the charging process of the battery. A homogeneous density and temperature is achieved throughout the cells, due to the circulation of the electrolyte.
- It is possible to "partially" charge the battery in order to prolong the autonomy of the electrical vehicles.
- The overcharge coefficient is 70% lower.
- The water consumption is reduced by 70%. This extends the battery's maintenance period.
- During the charging process energy consumption is reduced up to 20%.
- A longer cell life cycle is achieved due to the uniform decay of the plates.

Automatic Filling System:

Automatic Filling System (A.F.S.) allows the user to top up the cells of the battery from one central point through an integrated piping system, installed on the battery. The automatic filling plugs ensure the optimum filling level of the cells, minimizing the required maintenance time for the battery.

Chargers for Motive Power Batteries

SUNLIGHT battery chargers are designed to recharge low, medium and high capacity traction batteries (depending on the application). The product range includes single and three phase chargers of thyristor and switch-mode technology.

A wide variety of battery chargers will provide the best solution to any battery recharge need.

Features & Benefits:

- Programmable/Automatic charging profile (depending on the model).
- · Available multiple charging profiles for different battery technologies.
- Conformity to EN 61000-6-3: Electromagnetic Compatibility (EMC).
 Generic Standards.

Emission standard for residential, commercial and light-Industrial Environments.

- Conformity to EN 61000-6-2: Electromagnetic Compatibility (EMC).
 Generic Immunity Standards for Industrial Environments.
- Automatic/Manual Equalization charging.
 This ensures battery availability at all times, having the battery always charged and ready for use.
- Fully Automatic Operation: Automatic reset and start-up.
- Charge start delay: Ensures safe connection of the battery.
- LED display: Shows state of charge and fault conditions, with option for remote indication.
- Ease of installation: Plug and appliance socket fitted on all types.
- Fault Protection: from damage due to battery, charger, or operator errors.
- Compact design.
- · High Power factor and efficiency.
- · Optimal charging factor based on the depth of discharge.
- · Memory on last charges (available on specific models).

A wide range of SUNLIGHT Traction battery chargers ensures the correct operation and longer service life of the battery.

- Single phase chargers CEMB 30 Series (Wa)
 - V DC: 12V, 24V, 36V, 48V
 - A DC: from 20A up to 80A
- Single phase chargers **ECO Series** (Wa)
 - V DC: 24V, 36V, 48V, 72V, 80V
 - A DC: from 60A up to 120A
- Single phase chargers COMPACT 30 Series (Wa)
 - V DC: 24V, 36V, 48V, 72V, 80V
 - A DC: from 40A up to 140A
- Three phase chargers COMPACT 30 Series (Wa)
 - V DC: 24V, 36V, 48V, 72V, 80V, 96V
 - A DC: from 60A up to 180A

- Three phase chargers
 - DIGIT 3001 AIRLIFT Series (Wo-Wa)
 - V DC: 24V, 36V, 48V, 72V, 80V, 96V
 - A DC: from 50A up to 300A
- Three phase chargers SIRIUS Series (Wo-Wa)
- V DC: 24V, 36V, 48V, 72V, 80V, 96V
- A DC: from 60A up to 240A
- Three phase chargers
 - **Eagle High Frequency Series**
 - V DC: 24V, 36V, 48V, 72V, 80V
 - A DC: from 50A up to 120A
- Three phase chargers
 - Sirius Chopper High Frequency Series
 - V DC: 24V, 48V, 80V
 - A DC: from 200A up to 500A
